Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-20, drawn to a device/method of controlling an Optical domain Adaptive dispersion Compensation and an Electrical domain Adaptive dispersion Compensation, classified in class 398, subclass 147.

II. Claim 21, drawn to a method of translating channel states into a channel value, classified in class 375, subclass 295.

III. Claims 22 and 23, drawn to a method of blind channel initialization, classified in class 455, subclass 67.11.

2. The inventions are distinct, each from other because of the following reasons:

Inventions I, II, III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because invention I is related to a device/method of controlling an Optical domain Adaptive dispersion Compensation and an Electrical domain Adaptive dispersion Compensation. Invention II related to a method of translating channel states into a channel value. Invention III related to a method of blind channel initialization.

The invention I and II different because invention I does not have a method of translating channel states into a channel valud. Invention I and III different because invention I does not have a method of blind channel initialization.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Groups I, II, restriction for examination purposes as indicated is proper.
